

‘INDUSTRIAL PLANT DATA VIEWER’ (SNEAK PREVIEW)

Providing access to environmental information
on industrial plants
(V1: Large Combustion Plants)

EEB

European
Environmental
Bureau

WHY WE SET UP THIS DATABASE?

WHY WE SET UP THIS DATABASE?

- Follow up “[Burning: the evidence](#)” publication (Nov. 2017)
- Promotion of public participation and access to environmental information (Aarhus and PRTR related)
- Enable environmental benchmarking (BAT uptake – gap potentials, derogations, consumption of water, land grab, outputs etc) with appropriate data filters and automatic calculation of results in terms of impacts
- Benchmarking of countries (permit writers) and companies (mother companies)
- Support legal + campaign work
- **Current scope: energy generation (LCP >50MWth all fuels incl. waste co-incineration)**
- **Future scope: cement, refineries, iron & steel, etc?**

MAIN FEATURES

Industrial Plant Data Viewer

Welcome to the European Environmental Bureau's data viewer for industrial plants in Europe. This contains a wide range of information related to air pollutant emissions, compliance, and impacts of emissions for all public power stations and district heating plants

There are two ways that you can explore the data:

Compare Plants

Use filters to find comparable plants, then rank the plants by their emissions and associated health costs.

Pick a Plant

Use filters to find specific plants you would like to see the data for. In the later tabs you can view detailed information for the selected plant(s).

THE HOMEPAGE

Methodology Note in finalisation

Here are some tips for using Tableau to get you started:

Tooltips

When hovering over graphs, a tooltip will often appear containing more information about a data point.

Reset

Reset

In the Tableau toolbar at the bottom on the page there is a button to reset the viewer. You can also refresh your browser.

Download

Download

To download data, select a graph, then click download in the Tableau toolbar.

View Data

When data is selected, more options will appear in the tooltip, including the option to view the underlying data.

Map Tools

You can use CTRL to multiselect points. In a map you can also use the map tools in the top left to select an area.

COMPARE PLANTS SECTION

Compare Plants

In this sheet you can compare air pollutant emissions, associated health costs and permit limit values of different plants. There are also aggregated rankings for health costs by country and parent company, and number of derogations granted by country.

Use the "Show data by" menu to select which parameter to display, and filters to select the subset of plants, years and pollutants you would like to see.

☒ NMVOC
☒ NO_x
☒ PAHs
☒ Pb
☒ PM
☒ SO₂

Pick a Plant

Please select a plant by clicking on a point on the map or row of the table. Use the filters to narrow down the options. You can select multiple plants to view aggregated data, though some figures will only display data correctly for a single plant.

Overview Table

Plant ID	EPTR National ID	Plant Name	Main Fuel Type	LCP Size (MWth)	Derogations
AT0001	20000.00273	Energie AG Oberösterreich Kraftwerke GmbH, Standort Timelkam, KW Time..	Natural gas	300-1000	
AT0002	20000.00051	EVN AG, EVN AG Kraftwerk Korneuburg, KWK Block B	Natural gas	300-1000	

3

DETAILS AND DOCUMENTS

Details and Documents

In this tab you can view administrative details for the plants, see what abatement techniques are used and whether any derogations are granted. In the last panel, the URLs will take you to a SharePoint page to view plant documents.

Selected Plants: BG0014

Details

Plant ID	BG0014
EPTR ID	13000002
Plant Name	"TETs Maritsa iztok 2" EAD
Country	BG
City	Kovachevo
Coordinates	42.256, 26.1320
Start Date of Operation	1966-10-25
Competent Authority	Executive Environment Agency
Parent Company	TETS MARITSA IZTOK 2

Abatement Techniques

Not available	Not available	Not available
---------------	---------------	---------------

Derogations

Inspection Report	Not available	
Other Documents	Not available	
Permits	Not available	

When you hover over the derogations, a description appears.

Plant: BG0014

Article 15(4): Allows for emission limit values less strict than the emission levels associated with the best available techniques (BAT-AELs) if the BAT-AELs would lead to disproportionately higher costs.

Derogation	Status	Duration	Pollutants	Points Made	Not changed
Article 15.4	Granted	Time Limited	1	None	No

Plant: BG0014

Article 31: Combustion plants and co-firing plants that burn high sulphur indigenous solid fuel may apply lower rates of desulphurisation

FUEL USE AND EFFICIENCY

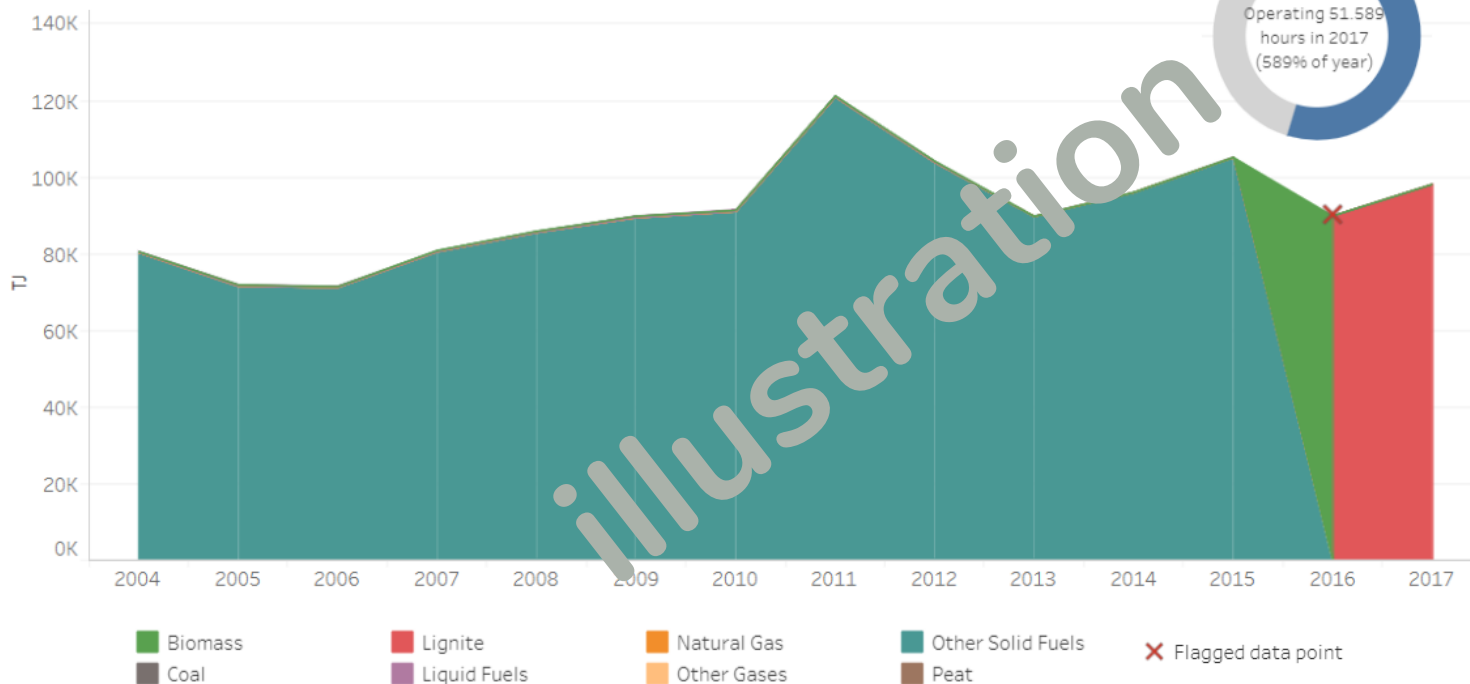

Fuel Use and Efficiency

On this tab you can view plant fuel use, operating hours and electricity generation. Data on electricity generation is from the ENTSOE database (<https://transparency.entsoe.eu/>), split/aggregated as necessary to match the LCP database.

Selected Plants: BG0014

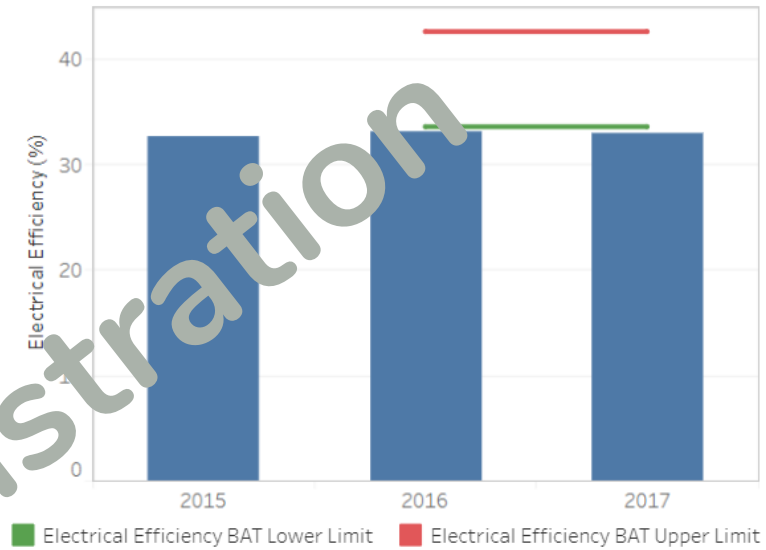

Fuel Use

Electricity Generation

Electrical Efficiency

EMISSIONS AND COMPLIANCE

Emissions and Compliance

On this tab you can find detailed information on plants emissions and limit values. The data is given in both tonnes and concentration. Limit values are converted into tonnes using estimated flue gas volume.

Please select a pollutant:

ISSUES AND NEEDS FOR THE DATABASE

SITUATION ON ATD REQUESTS

COLLABORATIVE AUTHORITIES

Country	
Croatia	Scotland
Estonia	Northern Ireland
Austria	England
Wales	Denmark
Germany	Finland
Italy	Belgium
Slovenia	Sweden
Romania	France
Malta	Netherlands
Spain	Lithuania

AUTHORITIES NOT COLLABORATIVE

Country	Status
Bulgaria	Not collaborative
Poland	Not collaborative
Portugal	No response yet
Greece	No response yet
Cyprus	No response yet
Latvia	Just sent
Slovakia	Just sent
Hungary	Just sent

COUNTRIES WHERE WE ENCOUNTER A LANGUAGE BARRIER

Country (no of LCPs)	
ESTONIA (17)	SWEDEN (152)
POLAND (277)	PORTUGAL (48)
FINLAND (189)	
DENMARK (67)	
BULGARIA (23)	
LITHUANIA (28)	
SLOVENIA (19)	

DEROGATIONS

Countries we require help with for derogations (15.4 - Art 32 TNP) :

- United Kingdom
- Poland
- Spain

- ❖ ENTSO-E energy output matching with LCP-D entries very difficult / impossible
- ❖ Many data entry errors on fuel inputs e.g. problem with German lignite plants co-firing waste
- ❖ Art 15.4 derogation templates to be filled ([link](#))
- ❖ Reality check on Art 32 TNP derogated plants to be done
→ ***get in touch with Andreea.Popa@eeb.org and Valentina.Weiskopf@eeb.org***

FURTHER STEPS

- ✓ Still finalising plausibility checks and manual corrections
 - ✓ Manual import of permit ELVs applied for main pollutants (air and water)
 - ✓ Manual import of CEM data result for the plants
 - ✓ Manual import of the documents received and making publicly available via sharepoint
 - ✓ Updating of the Art 15.4 derogation templates + reality check on TNP opted in plants
 - ✓ Land Grab metric to be updated. More suitable land grab metrics? 'typical wheat fields' or 'crop yields' or 'how many people could have been fed' -> kg of food produced
-
- Launch date V1: expected to be End-January 2020.
 - We would like to combine with reactivation of the 'Burning the Evidence' demands (access to info and public participation IED installations / IED Registry)

For V2:

- ✓ to present emission intensity per output
e.g. X g pollutant/KWel output for CO₂, NO_x, SO₂, dust and hg
- ✓ Scorecards per plant / mother companies and also for countries
(ambition level permit limits, health impacts etc)
- ✓ Strictest top / most laxists flop 30 permit limits
- ✓ Integrate the water consumption and emissions impacts
- ✓ Extend the lignite mining information e.g. average heating value, Sulphur content and mercury content (also to calculate plausible hg emissions), number of people expropriated, liability info etc
- ✓ Update on the abatement techniques implemented
- ✓ Extend to other industry sectors (cement, iron and steel, refineries...)
- ✓ Implement improvement suggestions (tbc)
